Non-slip floor designs with LAMILUX Anti Slip

Not a smooth matter

The fibre-reinforced composite material LAMILUX Anti Slip is the trusted anti-slip material for floors in logistics and transport. The abrasion-resistant surface guarantees maximum protection against merchandise and industrial goods slipping in commercial vehicles, on loading ramps or storage spaces. But it also ensures a firm grip for vehicles in rear garages of caravans. The intensity of the grit can be tailored to the scope of application - and Anti Slip even provides sound insulation for loading.

LAMILUX Anti Slip makes complex anti-slip finishings to be applied subsequently a thing of the past. In the 2-in-1 product, the anti-slip grit is applied directly and uniformly to the glass-fibre reinforced plastic (GRP) in a continuous automated production process. This makes the material extremely robust and extremely resistant to wear even when the floor is under repeated and heavy stress. Thanks to the highly abrasion-resistant surface, there are therefore no costs or time required for repairs.

New: even more scratch-resistant with clean grip

The new **LAMILUX Anti Slip PES Clean Grip** incorporates a special granular aggregate to withstand harsher and even more persistent loading conditions. This makes the anti-slip flooring even more robust. Its service life is extended, while the functionality of the material remains unchanged.

The weight reduction by the GRP material also speaks for itself, because floors on truck bodies and trailers are often made of wood or multiplex sheets. If the more durable **LAMILUX Anti Slip** is used instead, the result is a lighter flooring structure than previous designs, or enhanced stability and more effective anti-slip properties. When

tested pursuant to DIN 51130, the composite plastics achieved the highest values for anti-slip protection.

Sound insulation according to PIEK guideline

LAMILUX Anti Slip is also able to achieve noise levels of under 60 dBA when vehicles are loaded, as required by the Dutch PIEK noise abatement program. When the material is used in a truck, the vehicle can now also be loaded and unloaded in close proximity to residential districts in urban areas twenty-four hours a day.

About LAMILUX Composites GmbH

LAMILUX Composites GmbH has been pr**oducing fibre-reinforce**d composites for over 60 years. This medium-sized company is Europe's leading producer thanks to its technologically advanced continuous manufacturing process, large production capacities and wide product range. **LAMILUX** supplies customers around the globe in a wide range of sectors, such as the construction industry, the automotive and recreational vehicle industries, refrigerated store room and cell construction and many other industrial sectors. In 2017, LAMILUX and its more t**han 950** employees achieved a turnover of 263 million euros. The family-managed company is based in Rehau, Bavaria.
