1 General Product Information

Product definition

The EPD relates to the product group Glass architecture and applies to:

1 m² Glass Roof PR60 and Smoke Lift Glass Roof PR60 of company LAMILUX Heinrich Strunz GmbH

The declared unit is obtained by summing up:

Product group	Assessed product	Declared unit	Product weight
PG1	PR60	1 m ²	63.29 kg/m ²
PG2	PR60RWA	1 m²	75.69 kg/m²

Table 1 Product groups

The average unit is declared as follows:

Directly used material flows are determined using average sizes (1.00 m \times 1.00 m) and allocated to the declared unit. All other inputs and outputs in the manufacture were scaled to the declared unit as a whole, since no direct assignment to the average size is possible. The reference period is the year 2023.

The validity of the EPD is restricted to the following models:

- Northern light type glass roof PR60 (PG1)
- Pyramids type glass roof PR60 (PG1)
- Hipped roof type glass roof PR60 (PG1)
- Pitched roof type glass roof PR60 (PG1)
- Shed roof type glass roof PR60 (PG1)
- Saddleback roof type glass roof PR60 (PG1)
- Smoke lift glass roof PR60 (PG2)
- Smoke lift glass roof PR60 Type M (PG2)

Product description

LAMILUX glass roof PR60:

- Individually plannable glass roof construction as a mulliontransom construction system
- Thermal transmittance of mullions and transoms up to 0.72 W/(m²K), surface temperature fRSi up to 0.83 (both depending on glass thickness)
- Profile system:
 - Supporting structure made of torsion-free aluminum
 - Virtually free polygonal shaping from 0° to 90°
 - Ventilation of glazing rebates
 - Water and condensate drainage through EPDM secondary drainage
 - o Elastic bedding of glass pane
 - Visible elements of supporting structure (aluminum) and roof panels with RAL coating
- CE-tested quality according to EN 13830
- Wall connection: Installation on concrete upstand, wooden upstand, vertical on wooden plank edge or on sheet steel frame

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Product group: Glass architecture

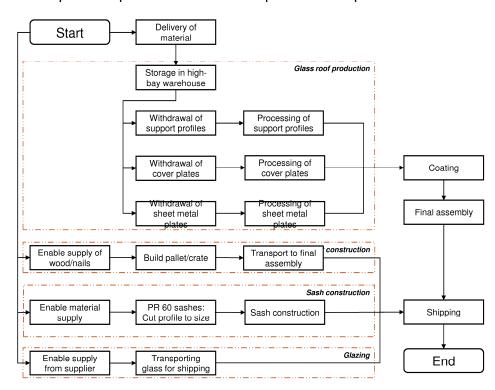

LAMILUX smoke lift glass roof PR60:

- Sash width and height infinitely variable
- Variable choice of drive systems
- Also suitable for renovation

For a detailed product description refer to the manufacturer specifications or the product specifications of the respective offer/quotation.

Page 4

Product manufacture

Scope

Multifunctional daylight systems and glass roof constructions are used in e.g.

- Office and administration buildings,
- Industrial buildings,
- Public buildings,
- Private buildings.

Test evidence / reports

The following verifications are held:

- CE product quality according to DIN EN 13830:2003
- Product quality according to DIN EN 12101-2
- Product quality according to DIN EN 14351-1
- National technical approval Z-14.4-672
- National technical approval Z-14.4-673

For information on further and updated verifications (including other national approvals) refer to www.lamilux.de.

Management systems

The following management systems are held:

Quality management system as per DIN EN ISO 9001:2015

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

ift

Product group: Glass architecture

Additional information For additional verifications of applicability or conformity refer to the CE

marking and the documents accompanying the product, if applicable.

Page 5

2 Materials used

Primary materialsThe raw materials used can be found in Section 6.2 Life cycle inventory

(Inputs).

Declarable substances No substances according to REACH candidate list are included

(declaration of 25.07.2024).

All relevant safety data sheets can be obtained from LAMILUX Heinrich

Strunz GmbH.

3 Construction process stage

Processing recommendations, installation

Observe the instructions for mounting/installation, operation, maintenance and disassembly, provided by the manufacturer. For this, see www.lamilux.de

4 Use stage

Emissions to the environment

No emissions to indoor air, water and soil are known. There may be VOC emissions.

Reference service life (RSL)

The RSL information was provided by the manufacturer. The RSL must be established under specified reference conditions of use and relate to the declared technical and functional performance of the product within the building. It must be determined according to all specific rules given in European product standards or, if none are available, according to a c-PCR. It must also take into account ISO 15686-1, -2, -7 and -8. If there is guidance on deriving RSLs from European Product Standards or a c-PCR, then such guidance must take precedence.

If it is not possible to determine the service life as the RSL in accordance with ISO 15686, the BBSR table "Nutzungsdauer von Bauteilen zur Lebenszyklusanalyse nach BNB" (service life of building components for life cycle assessment in accordance with the sustainable construction evaluation system) can be used. For further information and explanations refer to www.nachhaltigesbauen.de.

For this EPD the following applies:

For an EPD "cradle to factory gate with options", with modules C1-C4 and module D (A1-A3 + C + D and one or more additional modules from A4 to B7), the specification of a reference service life (RSL) is only possible if the reference service life conditions are specified.

The useful life of the glass architecture of company Lamilux Heinrich Strunz GmbH is optionally specified as 50 years according to the BBSR table (code no. 362.111, version 2017).

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Product group: Glass architecture

Page 6

The service life depends on the characteristics of the product and the terms of use. The conditions and characteristics described in the EPD are applicable, in particular the characteristics listed below:

- Outdoor conditions: Weather conditions can have a negative effect on the service life.
- Indoor environment: No impacts (e.g. humidity, temperature) known that have a negative effect on the service life.

The reference service life is for the features, which are reported in this EPD or the relevant references for this purpose.

The RSL does not reflect the actual life time, which is usually determined by the service life and the redevelopment of a building. It does not give any information on the useful life, warranty referring to performance characteristics or guarantees.

5 End-of-life stage

Possible end-of-life stages

The Glass Roof PR60 and Smoke Lift Glass Roof PR60 are sent to central collection points. There the products are usually shredded and sorted into their constituents. The end-of-life stage depends on the site where the products are used and is therefore subject to the local regulations. Observe the locally applicable regulatory requirements.

In this EPD, the modules of after-use are presented according to the current market situation and according to DIN EN 17213.

Steel, glass and plastic are recycled to certain parts. Residual fractions

Disposal routes

The average disposal routes were taken into account in the LCA.

All life cycle scenarios are detailed in the Annex.

are sent to landfill or, in part, thermally recycled.

6 Life Cycle Assessment (LCA)

Environmental product declarations are based on life cycle analyses (LCAs) which use material and energy flows for the calculation and subsequent representation of environmental impacts.

As a basis for this, life cycle assessments were prepared for Glass Roof PR60 and Smoke Lift Glass Roof PR60. These LCAs are in conformity with the requirements set out in DIN EN 15804 and the international standards DIN EN ISO 14040, DIN EN ISO 14044 and EN ISO 14025 as well as based on ISO 21930.

The LCA is representative of the products presented in the Declaration and the specified reference period.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Page 7

Product group: Glass architecture

6.1 Definition of goal and scope

Goal

The goal of the LCA is to demonstrate the environmental impacts of the products. In accordance with DIN EN 15804, the environmental impacts covered by this Environmental Product Declaration are presented for the entire product life cycle in the form of basic information. Apart from these, no other environmental impacts have been specified.

Data quality, data availability and geographical and timerelated system boundaries The specific data originate exclusively from the 2023 fiscal year. They were collected at the plant located in DE-95111 Rehau and originate in parts from company records and partly from values directly obtained by measurement. Primary data was collected through specific measurements and from the company's own data management system for energy and packaging costs as well as for ancillary materials, consumables and waste/offcuts.

Generic data comes from the databases of the software "ecoinvent" (v3.10) and "EN15804 add-on to ecoinvent v3.10" (GreenDelta GmbH). No other generic data were used for the calculation.

Generic data are selected as accurately as possible in terms of geographic reference. If no country-specific data sets are available or if the regional reference cannot be determined, European or globally valid data sets are used.

Data gaps were either filled with comparable data or conservative assumptions, or the data were cut off in compliance with the 1 % rule.

The life cycle was modelled using the sustainability software tool "openLCA" for the development of life cycle assessments.

The data quality complies with the requirements of prEN 15941:2022.

Scope / System boundaries

The system boundaries refer to the supply of raw materials and purchased parts, manufacture/production, use and end-of-life stage of Glass Roof PR60 and Smoke Lift Glass Roof PR60.

No additional data from pre-suppliers/subcontractors or other sites were taken into consideration.

Cut-off criteria

All company data collected, i.e. all commodities/input and raw materials used, the thermal energy and electricity consumption, were taken into consideration.

The boundaries cover only the product-relevant data. Building sections/parts of facilities that are not relevant to the manufacture of the products, were excluded.

The transportation route of the pre-products/raw materials and packaging was taken into account.

Transport routes for waste were not taken into account.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Product group: Glass architecture

The criteria for the exclusion of inputs and outputs as set out in DIN EN 15804 are fulfilled. From the data analysis it can be assumed that the total of negligible processes per life cycle stage does not exceed 1% of the mass/primary energy. This way the total of negligible processes does not exceed 5% of the energy and mass input. Negligible processes (less than 1 mass % or energy %) were cut off if no adequate generic data sets were available for them.

Page 8

6.2 Life cycle inventory

Aim

All material and energy flows are described below. The processes covered are presented as input and output parameters and refer to the declared units.

Life cycle stages

The complete life cycle of Glass Roof PR60 and Smoke Lift Glass Roof PR60 is shown in the Annex. The product stage "A1 - A3", construction process stage "A4 - A5", use stage "B2 - B4", end-of-life stage "C1 - C4" and the benefits and loads beyond the system boundaries "D" are considered.

Benefits

The below benefits have been defined as per DIN EN 15804:

- Benefits from recycling
- Benefits (thermal and electrical) from incineration

Allocation of co-products

Allocations occur during production.

The allocation was based on the masses of products produced.

Allocations for re-use, recycling and recovery

If the products are re-used/recycled and recovered during the product stage (rejects), the components are shredded/broken, if necessary and then sorted into their single constituents. This is done by various process plants, e.g. magnetic separators.

The system boundaries were set following their disposal, reaching the end-of-waste status.

Allocations beyond life cycle boundaries

The use of recycled materials in the manufacturing process was based on the current market-specific situation. In parallel to this, a recycling potential was taken into consideration that reflects the economic value of the product after recycling (recyclate).

Secondary materials that enter the production process as input are calculated in module A1 as input without loads. No benefits are assigned to module D, but consumption to modules C3 and C4 (worst case consideration).

The system boundary set for the recycled material refers to collection.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Product group: Glass architecture

Secondary material

The use of secondary material by LAMILUX Heinrich Strunz GmbH was not considered in Module A3. Secondary materials are used.

Page 9

The materials with secondary material and the corresponding proportion are shown in Table 2.

Material	Secondary material share* in % per material
	Product
Aluminium	6.7 (PG2)

^{*} The secondary material share corresponds to the recyclate content according to EN ISO 14021

Note: The closed-loop portion (waste before use from the same process) is by definition not included in this figure.

Table 2 Secondary material share

Inputs

The following manufacturing-related inputs were included in the LCA per 1 m² Glass Roof PR60 and Smoke Lift Glass Roof PR60:

Energy

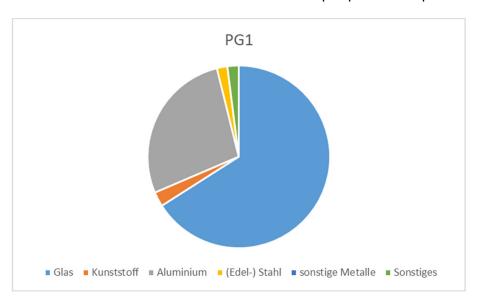

For the electricity mix, the "Electricity Mix Germany" was assumed.

Water

There is no water consumption in the individual process steps for production.

Raw material/pre-products

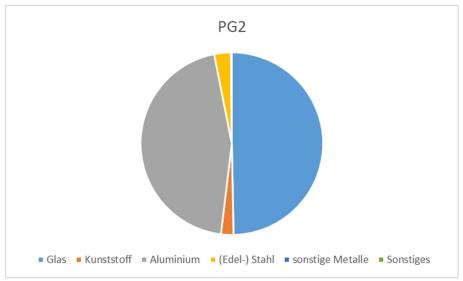

The charts below show the share of raw materials/pre-products in percent.

Publication date: 24.03.2025

Product group: Glass architecture

Page 10

Illustration 1 Percentage of individual materials per declared unit

No.	Material	Mass in %						
		PG1	PG2					
1	Glass filament	65.99	49.71					
2	Plastic	2.59	2.21					
3	Aluminium	27.54 44.98						
4	Stainless steel	1.86 2.96						
5	Other metals	0.00	<1					
6	Others	2.01	<1					

Table 3 Percentage of individual materials per declared unit

Ancillary materials and consumables

0 g of ancillary materials and consumables are used.

Product packaging

The amounts used for product packaging are as follows:

No.	Material	Mass in kg per product group (PG)								
140.	Waterial	PG 1	PG 2							
1	Paper	3.01	3.01							
2	wood	39.46	0.00							
3	Film/foil	<1	<1							
4	Metal (nails)									

Table 4 Weight in kg of packaging per declared unit

Biogenic carbon content

Only the biogenic carbon content of the associated packaging is reported, as the total mass of biogenic carbon-containing materials is less than 5% of the total mass of the product and associated packaging. According to EN 16449, the following amounts of biogenic carbon are generated for packaging:

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025 Page 11

1	In the associated packaging	19.73	0.00					

Table 5 Biogenic carbon content of the packaging at the factory gate

Outputs

The LCA includes the following production-relevant outputs per 1 m² Glass architecture:

Waste

Secondary raw materials were included in the benefits. See Section 6.3 - Impact assessment.

Waste water

The manufacture does not produce any waste water.

6.3 Impact assessment

Aim

The impact assessment covers inputs and outputs. The impact categories applied are named below:

Core indicators

The models for impact assessment were applied as described in DIN EN 15804+A2.

The impact categories presented as core indicators in the EPD are as follows:

- Climate change total (GWP-t)
- Climate change fossil (GWP-f)
- Climate change biogenic (GWP-b)
- Climate change land use & land use change (GWP-I)
- Ozone depletion (ODP)
- Acidification (AP)
- Eutrophication freshwater (EP-fw)
- Eutrophication salt water (EP-m)
- Eutrophication land (EP-t)
- Photochemical ozone creation (POCP)
- Depletion of abiotic resources fossil fuels (ADPF)
- Depletion of abiotic resources minerals and metals (ADPE)
- Water use (WDP)

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Product group: Glass architecture

Use of resourcesThe models for impact assessment were applied as described in DIN EN 15804-A2.

The following resource use indicators are presented in the EPD:

- Renewable primary energy as energy source (PERE)
- Renewable primary energy for material use (PERM)
- Total use of renewable primary energy (PERT)
- Non-renewable primary energy as energy source (PENRE)
- Renewable primary energy for material use (PENRM)
- Total use of non-renewable primary energy (PENRT)
- Use of secondary materials (SM)
- Use of renewable secondary fuels (RSF)
- Use of non-renewable secondary fuels (NRSF)
- Net use of freshwater resources (FW)

Page 12

Waste

The waste generated during the production of 1 m² Glass Roof PR60 and Smoke Lift Glass Roof PR60 is evaluated and shown separately for the fractions trade wastes, special wastes and radioactive wastes. Since waste handling is modelled within the system boundaries, the amounts shown refer to the deposited wastes. A portion of the waste indicated is generated during the manufacture of the pre-products.

The models for impact assessment were applied as described in DIN EN 15804-A2.

The waste categories and indicators for output material flows presented in the EPD are as follows:

- Disposed hazardous waste (HWD)
- Non-hazardous waste disposed (NHWD)
- Radioactive waste disposed (RWD)
- Components for re-use (CRU)
- Materials for recycling (MFR)
- Materials for energy recovery (MER)
- Exported electrical energy (EEE)
- Exported thermal energy (EET)

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025 Page 13

Product group: Glass architecture

Additional environmental impact indicators

The models for impact assessment were applied as described in DIN EN 15804-A2.

The additional impact categories presented in the EPD are as follows:

- Particulate matter emissions (PM)
- Ionizing radiation, human health (IRP)
- Ecotoxicity freshwater (ETP-fw)
- Human toxicity, carcinogenic effects (HTP-c)
- Human toxicity, non-carcinogenic effects (HTP-nc)
- Impacts associated with land use/soil quality (SQP)

Disclaimers:

*1 This impact category deals mainly with the eventual impact of low-dose ionising radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionising radiation from the soil, from radon and from some building materials is also not measured by this indicator

*2 The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

6.4 Interpretation, LCA presentation and critical review

Evaluation

The environmental impacts of

- Glass roof PR60 (PR60)
- Smoke lift glass roof PR60 (PR60RWA)

differ considerably from each other. The differences lie in the different pre-products and raw materials used and in the mass of the pre-products and raw materials used in each case. The higher use of glass in PG1 and aluminum in PG2, in particular, led us to expect this.

Page 18

In the area of production, the environmental impact of the products is mainly caused by the use of glass and aluminum or their upstream chains. PG2 has a higher environmental impact than PG1. This is due to the higher product weight and the higher electricity requirement in production.

In scenario C4, only marginal expenditures for the physical pretreatment and the landfill operation are to be expected. Allocation to individual products is almost impossible for site disposal.

Some LCA results differ considerably from the results presented in the EPD prepared five years ago. The reasons for this are that the life cycle assessments were prepared on the basis of different background data, the weights of the products have increased and a new data collection was carried out by the life cycle assessor.

The breakdown of the major environmental impacts is shown in the diagram below.

The values obtained from the LCA calculation are suitable for the certification of buildings.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Product group: Glass architecture

Diagram

The diagram below shows the environmental impact of the products in relation to the life cycle modules.

Page 19

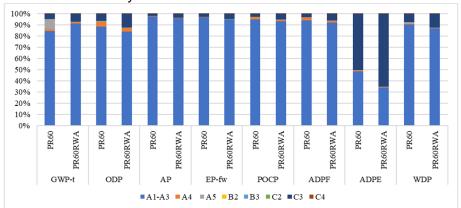

Illustration 2 Percentage of the modules in selected environmental impact indicators

Report

The LCA report underlying this EPD was developed according to the requirements of DIN EN ISO 14040 and DIN EN ISO 14044 as well as DIN EN 15804 and DIN EN ISO 14025. It is deposited with ift Rosenheim. The results and conclusions reported to the target group are complete, correct, without bias and transparent. The results of the study are not designed to be used for comparative statements intended for publication.

Critical review

The critical review of the LCA and the report took place in the course of verification of the EPD by the external verifier Susanne Volz.

7 General information regarding the EPD

Comparability

This EPD was prepared in accordance with DIN EN 15804 and is therefore only comparable to those EPDs that also comply with the requirements set out in DIN EN 15804.

Any comparison must refer to the building context and the same boundary conditions of the various life cycle stages.

For comparing EPDs of construction products, the rules set out in DIN EN 15804, Clause 5.3, apply.

The detailed individual results of the products were summarised on the basis of conservative assumptions and differ from the average results. Identification of the product groups and the resulting variations are documented in the background report.

Communication

The communications format of this EPD meets the requirements of EN 15942:2012 and is therefore the basis for B2B communication. Only the nomenclature has been changed according to DIN EN 15804.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Page 20

Product group: Glass architecture

Verification

Verification of the Environmental Product Declaration is documented in accordance with the "ift-Richtlinie zur Erstellung von Typ III Umweltproduktdeklarationen" (Guidance on preparing Type III Environmental Product Declarations) in accordance with the requirements set out in DIN EN ISO 14025.

The declaration is based on the PCR documents "PCR Part A" PCR-A-1.0:2023 and " Facades and roofs" PCR-FA-4.0:2023.

The European standard EN 15804 serves as the core PCR a)
Independent verification of the declaration and statement according
to EN ISO 14025:2010
Independent third party verifier: b)
Susanne Volz
^{a)} Product category rules
b) Optional for business-to-business communication
Mandatory for business-to-consumer communication
(see EN ISO 14025:2010, 9.4)

^{*} For declared B-modules, the calculation of the results is performed taking into account the specified RSL related to one year **Table 6** Overview of applied life cycle stages

The scenarios were calculated taking into account the defined RSL (see Point 4 Use stage).

The scenarios were based on information provided by the manufacturer.

<u>Note:</u> The standard scenarios selected are presented in bold type. They were also used for calculating the indicators in the summary table.

- ✓ Included in the LCA

A4 Transport

No.	Scenario	Description
A4.1	Small series via distributors	40 t truck (Euro 6), 100% capacity used ¹ , approx. 150 km there and empty back 7.5 t truck (Euro 6), 100% capacity used ¹ , approx. 50 km there and empty back A total of 400 km.
A4.2	Direct delivery to construction site/branch	40 t truck (Euro 6), 100% capacity used ¹ , approx. 900 km to construction site abroad and back empty A total of 1,800 km.

¹ Capacity used: utilized loading capacity of the truck

A4 Transport to construction site	Transport weight [kg/m²]	Density [kg/m³]	Capacity load factor ²
PG1	99.03	44.37	<1
PG2	75.69	33.91	<1

² Capacity load factor:

Product fills the packaging completely (without air inclusion)
Packaging contains unused volume (e.g. air, filling material)
Product is packed in compressed form = 1

< 1

A5 Construction/installation process

No.	Scenario	Description
A5.1	Installation with crane	A crane is required to install the products; A power consumption of 1.5 kW/h per 1 m ² of installed area was assumed.

In case of deviating consumption during installation/assembly of the products which forms part of the site management, they are covered at the building level.

Ancillary materials, consumables, use of energy and water, other resource use, material losses, direct emissions as well as waste during construction / installation are negligible.

It is assumed that the packaging material in the Module construction / installation is sent to waste handling. Waste is thermally recovered, recycled or landfilled: 95% of films/protective covers and 100% of wood in incineration plants. Steel is 95% recycled and 5% landfilled. The rest of the film goes to landfill. Benefits from A5 are specified in module D.

Transport to the recycling plants is not taken into account.

Since this is a single scenario, the results are shown in the relevant summary table.

B2 Cleaning, maintenance and repair

Since this is a single scenario, the results are shown in the relevant summary table.

B2.1 Cleaning

No.	Scenario	Description
B2.1.1	Rarely, manual	manual using suitable cleaning agents as specified by the manufacturer, yearly. (based on EN 17213: 0.2 I water and 0.01 I cleaner per 1 m ² surface per year)

Ancillary materials, consumables, use of energy and water, material losses and waste as well as transport distances during cleaning are negligible.

Since only one scenario is used, the results are shown in the relevant summary table.

The results were based on one year, taking into account the RSL.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Page 26

Product group: Glass architecture

B2.2 Maintenance and repair

No.	Scenario	Description
B2.2.1	Normal use	According to the manufacturer: Annual functional check, visual inspection, lubrication/greasing and, if necessary, repair. 0.01 kg lubricant per year and per 1 m ²

^{*} Assumptions for evaluation of possible environmental impacts; statements made do not constitute any guaranty or warranty of performance.

For updated information refer to the relevant instructions for assembly/installation, operation and maintenance issued by LAMILUX Heinrich Strunz GmbH.

The service life of Glass Roof PR60 and Smoke Lift Glass Roof PR60 der Firma LAMILUX Heinrich Strunz GmbH is given as 50 years. For scenario B2, the respective components of the building elements whose useful life is less than the specified RSL are not accounted for.

Ancillary materials, consumables, use of energy and water, waste, material losses and transport distances during repair are negligible.

Since only one scenario is used, the results are shown in the relevant summary table.

The results were based on one year, taking into account the RSL.

B3 Repair

No.	Scenario	Description
В3	Normal use and heavy use	According to EN 15804: The "Repair" module covers the combination of all planned technical and related administrative activities []. Repair parts in 50 a: Steel 7.6E-02 kg, zinc 0.20 kg, aluminum 2.2E-02 kg, EPDM 0.5 kg (PG1); Steel 3.4E-02 kg, aluminum 9.2E-02 kg, EPDM 1.79 kg (PG2)

Ancillary materials, consumables, use of energy and water, waste, material losses and transport distances during repair are negligible.

Since only one scenario is used, the results are shown in the relevant summary table.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Page 27

Product group: Glass architecture

B4 Replacement

No.	Scenario	Description
B4.1	No replacement	According to the BBSR table, no replacement is planned.

*Assumptions for evaluation of possible environmental impacts; statements made do not constitute any guaranty or warranty of performance.

The statements made in this EPD are only informative to allow evaluation at the building level.

It is assumed that no replacement will be necessary during the 50-year reference service life and the 50-year building service life. The results were based on one year, taking into account the RSL.

For updated information refer to the relevant instructions for assembly/installation, operation and maintenance issued by LAMILUX Heinrich Strunz GmbH.

Ancillary materials, consumables, use of energy and water, material losses, waste as well as transport distances during installation are negligible.

Since only one scenario is used, the results are shown in the relevant summary table.

C1 Deconstruction, demolition

No.	Scenario	Description
C1	Deconstruction	According to the manufacturer: 100% deconstruction

No relevant inputs or outputs apply to the scenario selected. The energy consumed for deconstruction is negligible. Any arising consumption is marginal.

Since this is a single scenario, the results are shown in the relevant summary table.

In case of deviating consumption, the removal of the products forms part of the site management and is covered at the building level.

C2 Transport

No.	Scenario	Description
C2	Transport	Transport to collection point with 40 t truck (Euro 6), 100% capacity used, 50 km (according to manufacturer).
Since only one scenario is used, the results are shown in the relevant summary table.		

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Page 28

Product group: Glass architecture

C3 Waste management

No.	Scenario	Description
С3	Manufacturer scenario	Share for recirculation of materials:

The table below describes the disposal processes and their percentage by mass/weight. The calculation is based on the above mentioned shares in percent related to the declared unit of the product system.

C3 Disposal	Unit	PG1	PG2
Collection process, collected separately	kg	0.00	0.00
Collection process, collected as mixed construction waste	kg	63.29	75.69
Recovery system, for re-use	kg	0.00	0.00
Recovery system, for recycling	kg	29.13	44.88
Recovery system, for energy recovery	kg	-2.87	-1.66
Disposal	kg	-31.30	-29.14

Since this is a single scenario, the results are shown in the summary table.

C4 Disposal

No.	Scenario	Description
C4	Disposal	The non-recordable amounts and losses within the re- use/recycling chain (C1 and C3) are modelled as "disposed".

The consumption in scenario C4 results from physical pre-treatment, waste recycling and management of the disposal site. The benefits obtained here from the substitution of primary material production are allocated to module D, e.g. electricity and heat from waste incineration.

Since only one scenario is used, the results are shown in the relevant summary table.

Declaration code: EPD-GA-GB-11.3.3

Publication date: 24.03.2025

Page 29

Product group: Glass architecture

D Benefits and loads from beyond the system boundaries

No.	Scenario	Description ¹
D	Recycling potential	Steel scrap from C3 excluding the scrap used in A3 replaces steel; Aluminum scrap from C3 excluding the scrap used in A3 replaces aluminum; Container glass from C3 excluding the cullet used in A3 replaces glass; Die cast scrap from C3 excluding the scrap used in A3 replaces zinc; Brass scrap from C3 excluding the scrap used in A3 replaces brass; Benefits from incineration plant: Electricity replaces electricity mix (DE); thermal energy replaces thermal energy from natural gas (DE).

¹ Applied value correction factor of 70.2% according to metal-specific data set, 60% according to standard data set for other materials.

The values in module D result from recycling of the packaging material in module A5 and from deconstruction at the end of service life.

Since this is a single scenario, the results are shown in the summary table.
